

Welcome!

*ENSE 281 GROUP PROJECT
Project Description: Design
& Develop A Small To
Medium Scaled, Web-Based
Software Application*

WINTER 2026 - GROUP E

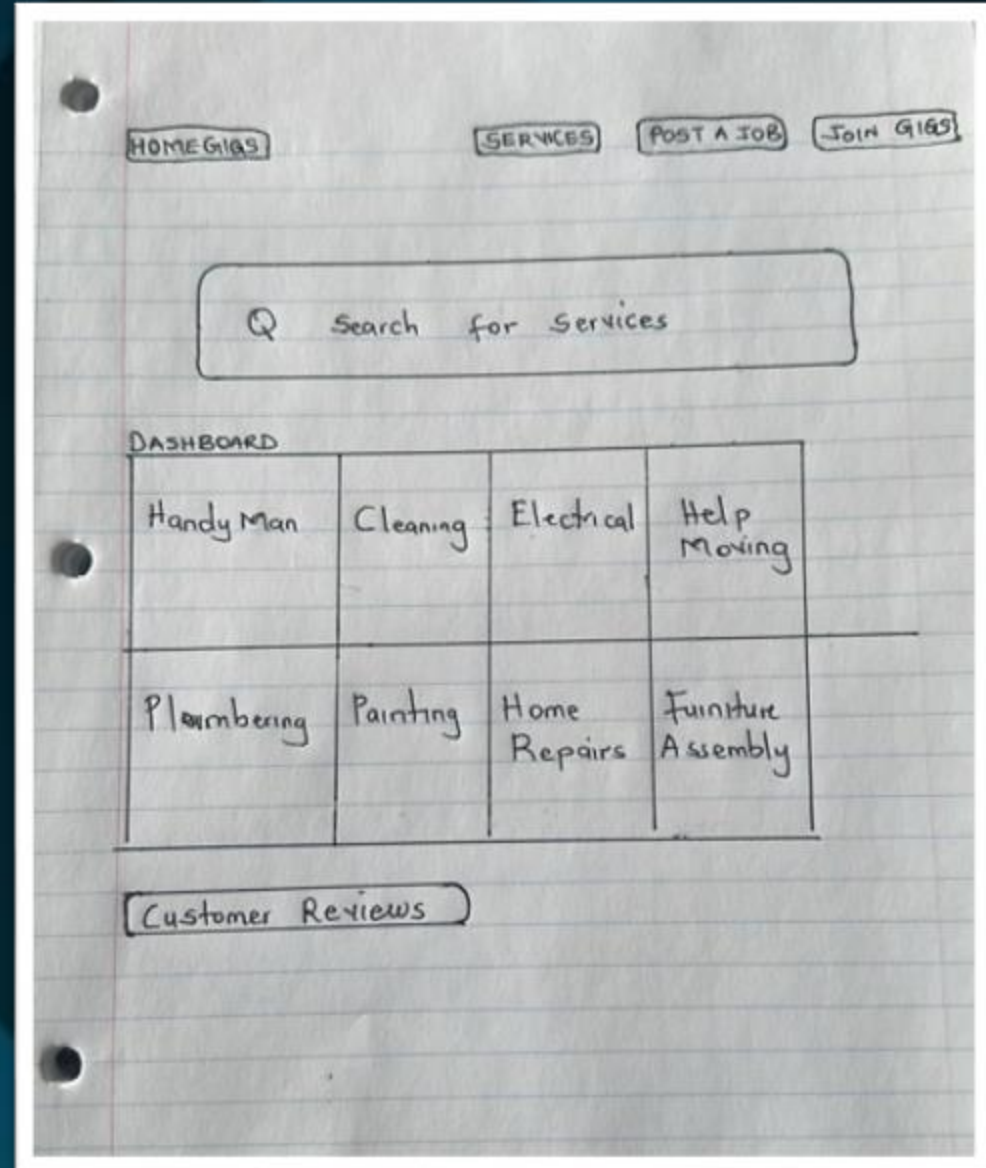

- Ali Abdullah*
- Nyabijek Gatdet*
- Chiemego Emmanuel*
- Chinedu Godswill*

HomeGigs

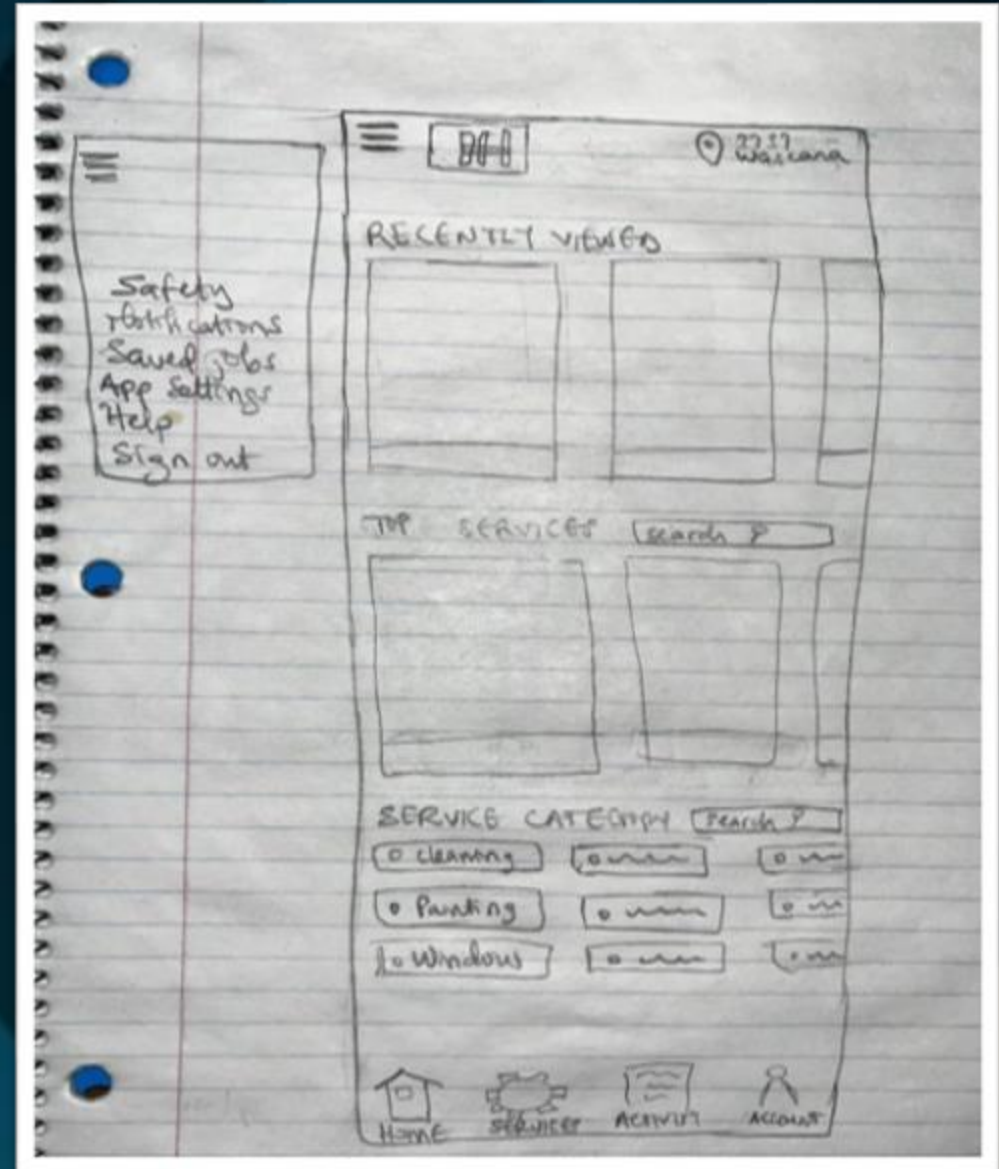

LOW FIDELITY PROTOTYPES

- Determine system prerequisites and system designing
- Three low fidelity prototypes (paper and pencil) to start planning
- Lofi Prototype 01

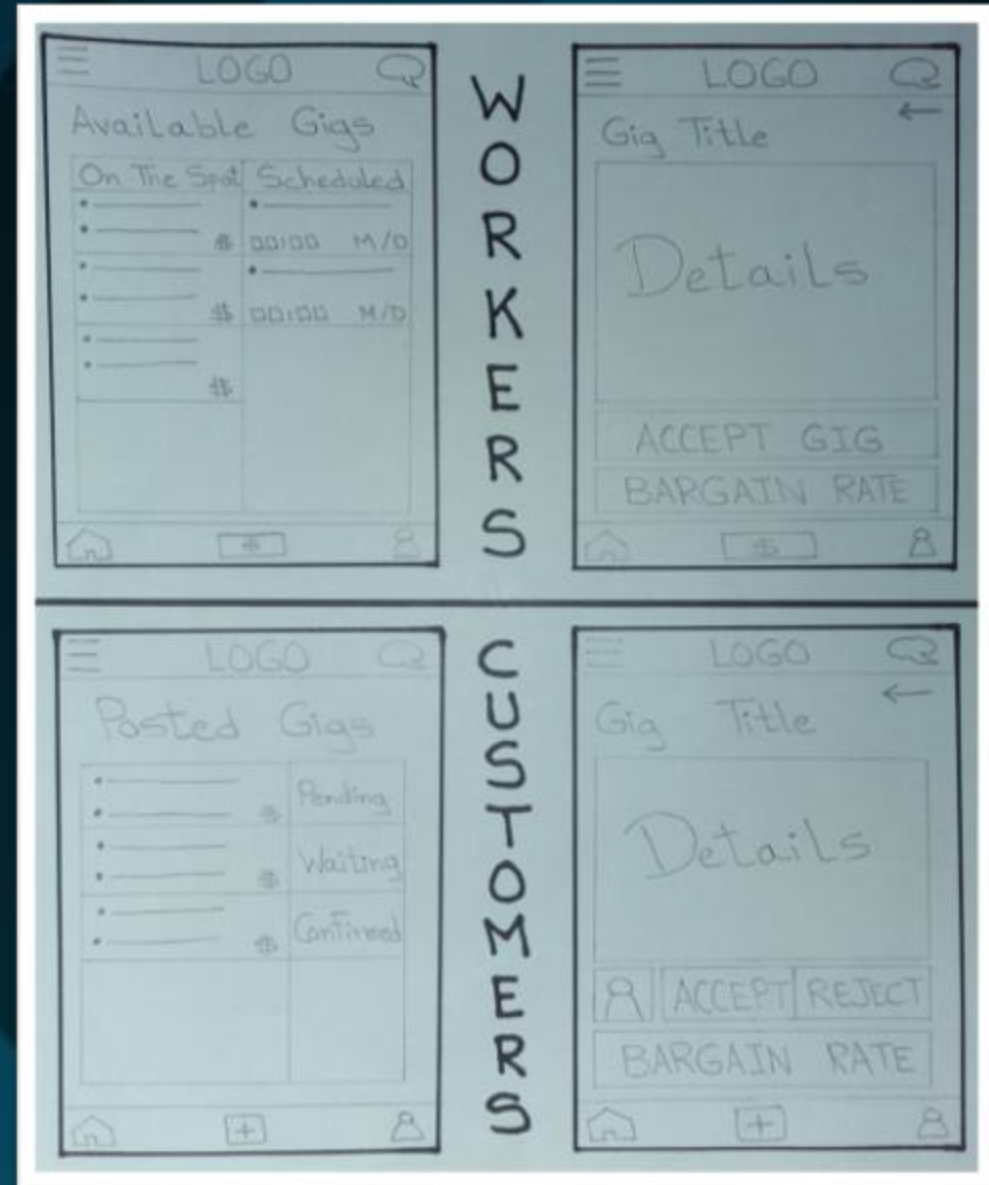

LOW FIDELITY PROTOTYPES

- Determine system prerequisites and system designing
- Three low fidelity prototypes (paper and pencil) to start planning
- Lofi Prototype 02

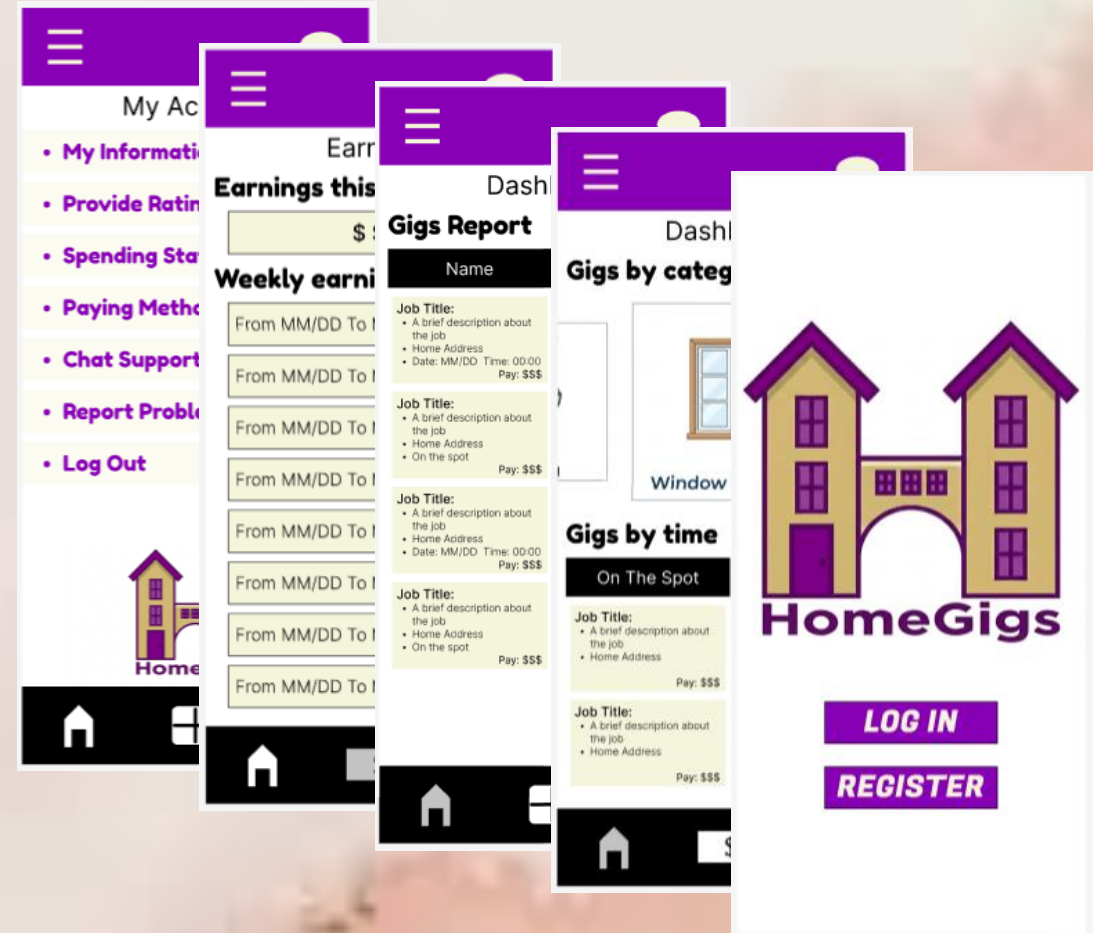

LOW FIDELITY PROTOTYPES

- Determine system prerequisites and system designing
- Three low fidelity prototypes (paper and pencil) to start planning
- Lofi Prototype 03

HIGH FIDELITY PROTOTYPE

- One high fidelity prototype using Figma (Design and function) and Gemini (AI to create photos)
- Functional MVPs:
 - Posting gigs by customers
 - Accepting gigs by worker
 - Contact between both sides
 - Price bargaining ability
- Colour Scheme: Purple & Beige

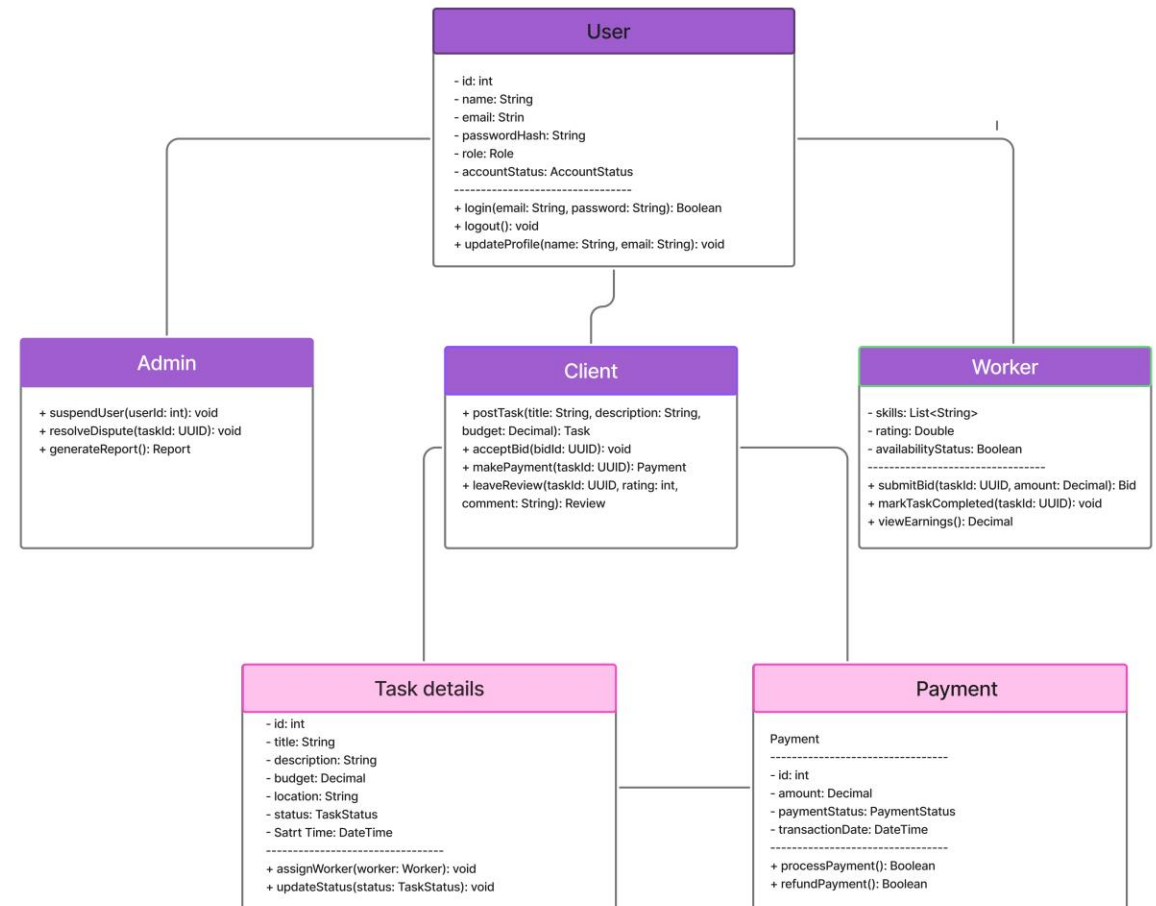

[ENSE 281 - Group E - High Fidelity Prototype Link](#)

UML DIAGRAMS

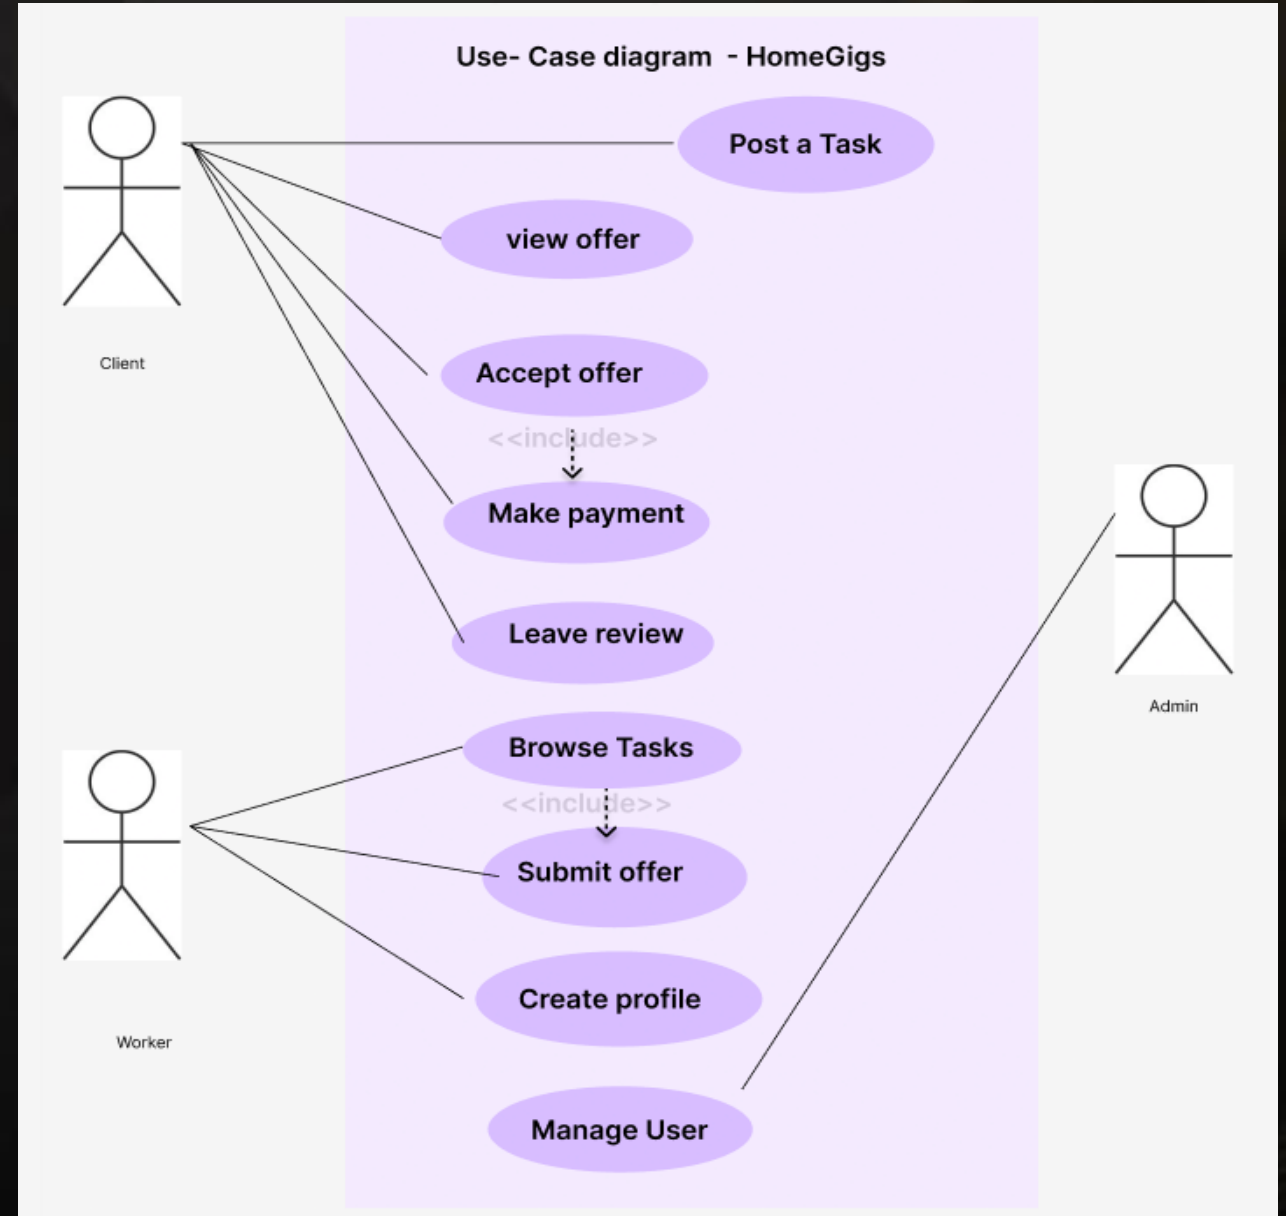

- A Unified Modeling Language (UML) diagram is a standardized visual representation used to model the structure, behavior, and interactions of software systems and business processes.
- It acts as a blueprint, allowing developers and stakeholders to plan, document, and communicate complex system architectures through visual, rather than just text-based.

UML Class Diagram- HomeGigs

UML DIAGRAMS

- A Unified Modeling Language (UML) diagram is a standardized visual representation used to model the structure, behavior, and interactions of software systems and business processes.
- It acts as a blueprint, allowing developers and stakeholders to plan, document, and communicate complex system architectures through visual, rather than just text-based.

SELF REFLECTION

- **Feelings about activity:**
 - *Interesting stuff , Real life growth , Business opportunity*
- **Most liked part:**
 - *Designing*
- **Least liked part:**
 - *Tons of documentation , Time conflicts with team members*
- **Proud about project:**
 - *Learning to be on the same page , Countless efforts*
- **Lessons learned:**
 - *Documents create a common ground , Accountability for members*
- **Experience going forward:**
 - *Do not take time for granted , Stay connected*
- **Help needed further:**
 - *Improve development skills , Manage time and material efficiently*

Any Questions?

Any Suggestions?

Any Specifications?

Any Recommendations?

*Thank
You!*

The End
