

PROJECT REQUIREMENTS DOCUMENT

Project Name

HomeGigs

Functional Requirements

- This application shall allow users to register either as a homeowner or as a worker.
- This application shall allow homeowners to create and post a gig.
- This application shall allow homeowners to specify job description, location, budget, date, and time, and upload images for the gig.
- This application shall allow workers to apply for gigs.
- This application shall allow homeowners to accept or reject applicable workers.
- This application shall update gig status: Waiting, Bargaining, Confirmed, or Completed.
- This application shall allow homeowners and workers to rate each other.
- This application shall allow communication between homeowners and workers.

➤ Technical/Performance Requirements

- This application shall be implemented as a web-based software application.
- This application shall be implemented with a combination of HTML, CSS/Bootstrap, JavaScript, MongoDB (or PHP/MySQL) for frontend, backend, and database implementation.
- This application should follow the MVC (Model View Control) design pattern.
- This application shall respond to users quickly (avoid longer interactions).
- This application shall encrypt user passwords to protect them from hacking.
- This application shall validate all user inputs.
