

Welcome!

ENSE 281 GROUP PROJECT
*Project Description: Design
& Develop A Small To
Medium Scaled, Web-Based
Software Application*

WINTER 2026 - GROUP E

- Ali Abdullah
- Nyabijek Gatdet
- Chiemego Emmanuel
- Chinedu Godswill

HomeGigs

PROJECT STATUS

Current Status: Yellow

- Partial implementation of designs & logics.
- Bargain feature is still under development.
- Worker dashboard showing gig categories but not access yet.
- System unable to classify the on spot and scheduled gigs.
- Logics / implementations getting failed or mismatched.
- Removal of worker accepting or rejecting gig due to code flaws.

Major Issues

- Some deliverables still in early stages, slowing integration.
- Insufficient skills due to more material and less practice.
- Time management due to personal life and academic workload.

THE BUILD – PAST WEEKS

- Completed core authentication components for dual portal system access and display.
- Established structural layouts for all pages, except the conversations.
- Began developing the gig marketplace; posting and browsing layouts.
- Initiated planning and design for bargaining opportunity.
- Improved layout efficiency and visual design across multiple pages.
- Removed multiple menu options and limited to 4, making one as a log out button.
- Learning different things like animations over the internet to make project desirable.
- Constant changes in logic implementation due to multiple run failures.

DEMO

THE PLAN – FUTURE WEEKS

- Expand functionality of the gig marketplace (posting, browsing, accepting, rejecting, bargaining).
- Develop the bargain system along with communication means (conversations between both parties to decide budget).
- Finalize menu options for both workers and customers (limited options but useful, like self-profile, view ratings, chat support etc.).
- Begin implementation and testing between all system components and connections (no bugs and failures expected)

SELF REFLECTION

- **Feelings about activity:**
 - *Way more complicated than previous activities , Almost there.*
- **Most liked part:**
 - *Learning animations in coding , Working of codes altogether.*
- **Least liked part:**
 - *Coding conflicts , Keeping pages integrated.*
- **Proud about project:**
 - *Learning to be on the same page , Countless efforts , Improvement.*
- **Lessons learned:**
 - *Give your best , Do not stress a lot , Patience is the key.*
- **Experience going forward:**
 - *Do not take time for granted , Stay connected frequently.*
- **Help needed further:**
 - *Practice & enhance coding skills , Manage time efficiently.*
