

Welcome!

*ENSE 281 GROUP PROJECT
Project Description: Design
& Develop A Small To
Medium Scaled, Web-Based
Software Application*

WINTER 2026 - GROUP E

- Ali Abdullah*
- Nyabijek Gatdet*
- Chiemego Emmanuel*
- Chinedu Godswill*

BETTER PAY

BETTER PRICES

BETTER WAY

HomeGigs

PROJECT IDEA / BACKGROUND

- People try to find different services during different seasons, for some occasions, or throughout the year as well.
- Services include snow removal, leaves raking, fence painting, and many more, but they are not always budget friendly or reachable quickly.
- Different ideas to enter this market with a number of different questions making their way into the golden circle, like:
 - Why do we need to step into this market, but in a different way to change the game around and make an impact as well?
 - Who are the people that need certain services and the ones that could provide those services, and how can they meet?
 - What constraints we currently face, and what can we do to make sure that these services stay budget friendly, and reachable?

"Instead of you approaching them, let them approach you"

PROJECT IDEA / BACKGROUND

- **WHY:** To bridge the gap between workers and basic home jobs while trying to eliminate the middle-men or big businesses that charge massive amounts.
- **WHO:** Home-owners willing to get a gig done and students or workers skilled in basic home jobs, that can meet through a common social source.
- **WHAT:** A simple web-based software application where customers can post gigs and workers can accept them to earn money, but time and skill constraints will exist for us.

"Instead of you approaching them, let them approach you"

Kanban board

The screenshot displays a GitHub Kanban Board for a project named 'PrescillaGatdet'. The interface includes a top navigation bar with a search bar and various icons. Below the navigation bar, the board is organized into columns representing different stages of the workflow: 'Ready', 'In review', and 'Done'. Each column contains a list of tasks, each represented by a card with a title, a status icon, and a progress indicator. The 'Ready' column has three tasks, 'In review' has one, and 'Done' has four. A 'Backlog' column is also visible on the left side of the board.

Filter by keyword or by field

Ready 0 / 10 Estimate: 0

This is ready to be picked up

- Software-Engineering-Management--ENSE-281- #12
Make website responsive
- Software-Engineering-Management--ENSE-281- #15
Implement backend registration Logic
- Software-Engineering-Management--ENSE-281- #18
Create logout function
- Software-Engineering-Management--ENSE-281- #20
Create "Post a Gig" Page

In review 0 / 10 Estimate: 0

This item is in review

- Software-Engineering-Management--ENSE-281- #21
Create gig listing page

+ Add item

Done 0 Estimate: 0

This has been completed

- Software-Engineering-Management--ENSE-281- #5
User can post gigs
- Software-Engineering-Management--ENSE-281- #6
Create repository Structure
- Software-Engineering-Management--ENSE-281- #9
Create Kanban Workflow
- Software-Engineering-Management--ENSE-281- #10
Create HomePage UI
- Software-Engineering-Management--ENSE-281- #11

Minimum Viable Products

- Dual Portal System
- Customers Posting Gigs
- Workers Accepting Gigs
- Bargaining Feature
- In-App Chat Function

Architecture & Design

We implemented an MVC (Model-View-Controller) architecture:

- Model: Handles data in the form of databases or schemas
- View: Displays the interface to users as different pages or popups
- Controller: Manages logic and interactions by providing control or functionality

This individuality of each aspect of architecture allowed us to:

- Maintain clean code
- Improve scalability
- Simplify debugging

Architecture & Design

Full Stack Development Logics:

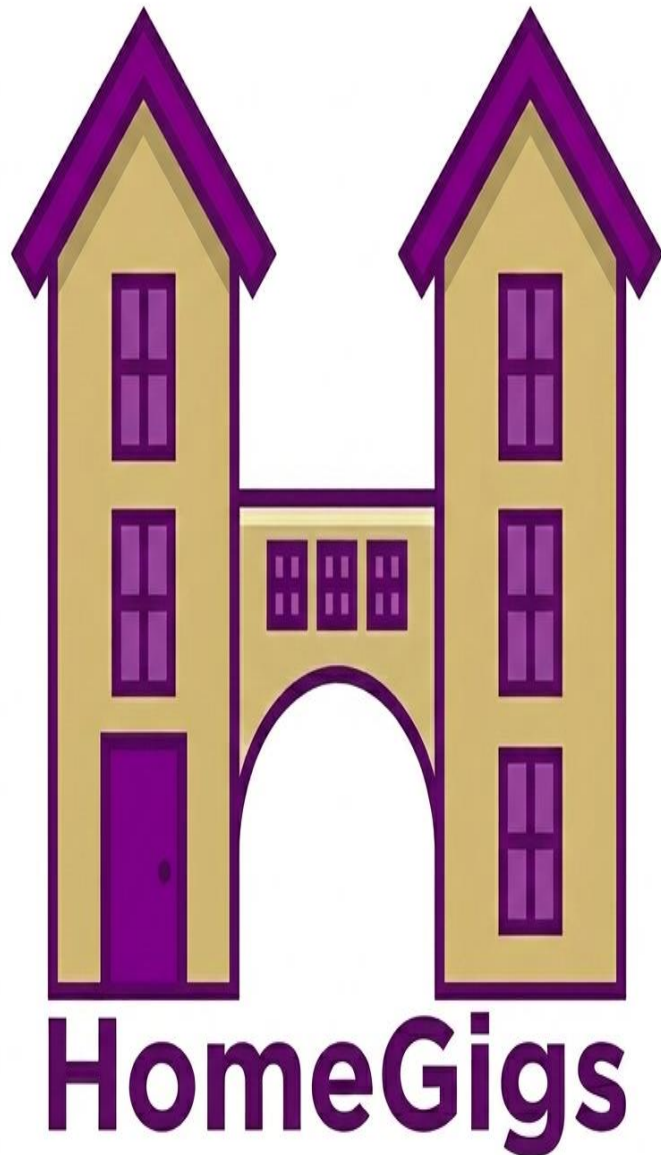

- HTML, CSS, JAVASCRIPT, DOM, NODE.JS, EJS, MONGODB, EXPRESS, PASSPORT etc

Major Steps In Designing:

- Design HTML pages for static view
- Update CSS file throughout
- Convert HTML files into EJS files
- Utilize all functional logics to make each page interactive and implement databases for each model (schema)
